

Original "PA with indicators" system rules summarized from the Forex Factory thread.

**INDICATORS**

- 1) Stoch (10,3,3, Simple, Close/Close) - Overbought/Oversold, move direction and divergence
- 2) Heiken Ashi (OHLC-HA candles) – Reduces noise, confirms PriceAction setups and move direction
- 3) ZZ Semafor - Shows swing highs and lows. Repaints, so backtest is useless
- 4) ZigZag
- 5) Pivot & Mid Pivot Points (Any Pivots WILL WORK!)
- 6) Daily Range Calculator - Shows max profit target for the day

Don't trade with emotions!!!

**RULES:**

It can be used on ANY TF, ANY Session, ANY PAIR or STOCK!! That is up to you and what you like to trade! The higher the TF the more pips....just as any other system! I use it on the M15 for Day Trading myself and I also use it on the H1-D1 for longer TERM TRADES! You Will Have Losing Trades....Nothing is 100%

Trend= More Pips

Counter Trend= Less Pips

For which way to trade, buy or sell.....GO WITH A HIGHER TF TREND! TREND is up to you, I look for higher highs or lower lows....TOO HARD? Then use a Moving Average or some kind of TREND indicator you are comfortable with. If you can't find the TREND...stick with your day job cause trend is not that hard.
